

AIR BARRIER **BOOT CAMP**

LEED and the US Army Corps of Engineers have started the additional requirement of verifying your air barrier system with a whole building air leakage test.

AEI provides advanced envelope inspections, testing and is now providing our Air Barrier Boot Camp to help you get your project off to a "Tight" start. A few hours of time for your team can save significant dollars from unnecessary delays, repairs or charge backs. Complete Air Barrier Systems are a required detail for many commercial buildings. Most project teams are not ready. AEI can provide you with a Boot Camp at your location. Your project then becomes the main focus of discussion. Contact AEI so you can tighten up your team's building envelope today!

Does your project team REALLY UNDERSTAND what it takes to build a complete, continuous and unbroken air barrier?

Have you completed buildings and found that you are not anywhere near the required air leakage specification?

Are you involving all of the project mgmt. team right through to the sub-trades so you can deliver a properly installed air barrier?

Have you had to "Retrofit" a new building that had no connectivity of the air barrier?

Can you provide clear instruction and final drawing details to the field so they know exactly what to do?
